psychology is in a growth stage which appears to have sprung up coincident to the man-in-space program. Contrary to the reference above (36), this source (36) believes that despite the growth and acceptance by the Soviet scientific community, the Soviets are merely duplicating or extending to some degree the research that is already known. In the opinion of this source, there is definitely a tie-in between the Soviet engineers, psychiatrists and psychologists. It must be remembered that the Soviets are presently in a growth stage and, therefore, are merely making their investments at this time. According to this source, once they have reached the level off period then this coordination of the disciplines will pay off handsomely in returns to the Soviet psychological society. The source believes that in the area of human engineering the Soviets are moving very rapidly and at least in many respects are close to US levels. In behavior studies, the Soviets are stagnant. They lean too heavily on the conditional response approach of Pavlov. In the neurosensory area, one source believes that the Soviets are considerably behind the US and accept the US as the leader in this field.

3. According to one report, there is apparently classified psychological research work going on in the area of cybernetics. One area that surveillance would appear fruitful is Soviet research in the area of artificial intelligence. This report contains a substantial number of institutes and personalities which is reflected in Appendix I (37).

4. (U) It is concluded that, in spite of their ideological resistance to theoretical psychology, Soviet behavior scientists share a distinguished experimental tradition and possess the ability to incorporate and combine the principles of biocybernetics, physiology, learning, memory, and transfer under a common group of laws (38).

5. (U) The following brief discussion of Soviet psychiatry is based primarily upon a report by Persic (39). The report contains a brief history of psychiatry in the Soviet Union followed by a section that relates to the scientific and investigative work in psychiatry. Also included is a section on the organization of psychiatric care including statistics on the number of patients, beds, and medical personnel in the Soviet Union.

after the password recovery was reenabled, it took seriously 45 mins on wikipedia and google to find the info, Birthday? 15 seconds on wikipedia, zip code? well she had always been from wasilla, and it only has 2 zip codes (thanks online postal service!)

the second was somewhat harder, the question was “where did you meet your spouse?” did some research, and apparently she had eloped with mister palin after college, if you'll look on some of the screenshots that I took and other fellow anon have so graciously put on photobucket you will see the google search for “palin eloped” or some such in one of the tabs.

I found out later though more research that they met at high school, so I did variations of that, high, high school, eventually hit on “Wasilla high” I promptly changed the password to popcorn and took a cold shower...

Twitter accounts of Britney Spears and Barack Obama hacked

Hackers have accessed the accounts of a series of celebrities on the popular micro-blogging site Twitter and left a variety of pornographic and dubious messages and links.

In the most serious breach of security for the burgeoning blogging site, beloved of the tech community, hackers have targeted more than 30 accounts including those belonging to Britney Spears, Barack Obama, Facebook, CNN anchor Rick Sanchez and the Huffington Post.
Moved into green zone by helicopter Iraqi flag now over palace. Headed to new US embassy Appears calmer less chaotic than previous here.

Mumbai: Twitter's Moment
Brian Caulfield and Naazneen Karmali, 11.28.08, 06:24 PM EST

Citizen journalism goes real time as Mumbai attacks unfold.

As gunmen and police engaged in a running three-day battle through the streets and hotels of Mumbai that left more than 100 dead Friday, social-networking services such as Twitter and Flickr were flooded with news, rumors and pictures of the mayhem.

Twitter was inundated with "tweets"--short bursts of information posted by users--Wednesday as mainstream media outlets struggled to catch up with the scope of the attacks on India's financial capital.

BBC admits it made mistakes using Mumbai Twitter coverage

Micro-blogging service Twitter came of age during the Mumbai terror attacks. However, the BBC has been criticised for using unsubstantiated citizen reports in its coverage.

There has been a mixed reaction to the BBC's use of live reports from micro-blogging service Twitter in its coverage of the Mumbai terror attacks.

BBC News website editor Steve Herrmann has added his thoughts to the debate, including an admission that the corporation will need to take more care in how it uses lightening fast, unsubstantiated citizen posts from Twitter in the future.

He raises a specific failing – regarding the widely-reported tweet that the Indian government called for an end to Twitter updates from Mumbai – which the BBC covered in a "live updates" aggregation page.
Holy fucking shit I was just in a plane crash!

5:25 PM Dec 20th, 2008 from twitterrific

2drinksbehind
Mike Wilson

Twitter, the increasingly popular microblogging service, was, as ever, leading the pack. When dozens of New York-based Twitter users started sending 'tweets' about a possible plane crash in the city, the news spread like wildfire across the Twitterverse. Indeed, Twitter users broke the news of the incident around 15 minutes before the mainstream media alerted viewers and readers to the crash. The first recorded tweet about the crash came from Jim Hanrahan, aka Manolantern, four minutes after the plane went down, who wrote: "I just watched a plane crash into the hudson riv [sic] in manhattan".
Near the White House. I love DC!!!!

Just saw the president take off from the White House. Nice chopper lol

Airforce 1 has landed - New York welcomes Obama!

Smoke in Manhattan area.

WTF is going on? Why are people running?

Lying Words: Predicting Deception From Linguistic Styles

Matthew L. Newman
James W. Pennebaker
*The University of Texas at Austin*

Diane S. Berry
*Southern Methodist University*

Jane M. Richards
*The University of Washington*

Telling lies often requires creating a story about an experience or attitude that does not exist. As a result, false stories may be qualitatively different from true stories. The current project investigated the features of linguistic style that distinguish between true and false stories. In an analysis of five independent samples, a computer-based text analysis program correctly classified liars and truth-tellers at a rate of 67% when the topic was constant and a rate of 61% overall. Compared to truth-tellers, liars showed lower cognitive complexity, used fewer self-references and other-references, and used more negative emotion words.

Is this like you?

I love large parties. I start conversations easily and end up talking to a lot of different people at parties. You could say I'm the life of the party.

I hate, hate, hate, hate, hate, HATE parties.
