A RISK ASSESSMENT OF LOGO DISCLOSURES

JENNIFER LEGGIO
CHIEF MARKETING OFFICER
@MEDIAPHYTER
That title is entirely too academic*

*yes, I wrote the title
“Most security marketers drive me crazy because they create risk rather than **reduce harm** and DON’T THEY KNOW THAT IS PART OF OUR JOB?!

/me deep breath

AND WE ALSO HAVE TO ADVOCATE FOR THE TECH COMMUNITY!”
Who is Jen?

SUCH AN INNOCENT YOUTH, FACED WITH A WORLD OF OPPORTUNITY

WANTED TO GO INTO FASHION, BUT CLEARLY LACKED THE SKILL

ALMOST 19 YEARS AS A SECURITY MARKETER; OBSESSED WITH BABY GOATS

SECURITY AND BABY GOATS ARE NOT RELATED INTERESTS
Everybody must reduce harm

What do manufacturers do? Try to make stuff that doesn’t harm

What do security vendors do? Sell stuff intended to reduce harm

What do researchers / engineers / practitioners do? Reduce harm

What do marketers too often do? Create risk or sensationalize
Examples, you say? Got ‘em!
We are going to change the way business and marketing leaders interact with researchers and analysts, and raise the bar for ethics.

We are going to empower researchers and analysts to advocate business and marketing leaders for better practices.
YOU GUYS RIGHT NOW

ME
Why not a standards desk?
A real-life use case: Flashpoint

- We partner closely with the “makers” in the company; never use these teams as a personal content repository
- We are besties with the intelligence and research teams; more work but worth it for quality
- We are all challenged to learn and care about security outcomes — even the non-technical
- We double check with multiple internal folks to ensure all statements are true
  - No statements include scare tactics
  - Operational security (OPSEC) is never compromised
  - Sources are protected
  - Personas are protected
  - Investigations are not disrupted
THE JOB OF MARKETING IS TO SELL STUFF

THE JOB OF MARKETING IS TO PROTECT USERS
Education is an imperative
Basic Decision Tree

1. **Vulnerability**
   - It's a malware vulnerability
   - It will tip off a cybercriminal

2. **Shared with [company]**
   - Yes
   - No

3. **Disclosure coordinated**
   - Yes
   - No

4. **Educational for practitioners**
   - Yes
   - No

5. **Message not scary or spun**
   - Yes
   - No

6. **Researcher(s) credited**
   - Yes
   - No

... (Continued)
But Jen, I’m not a marketer and I don’t care \_(ツ)_/\
CHANGE
Create a culture shift – one that benefits everyone

- Speak with your management about creating an ethics or standards board
  - Express the end state you want is more truth and better security
  - Share that you are willing to support on a committee to provide guidelines

- Company doesn’t have a coordinated disclosure policy? Build one
  - Ask why; “we are not a security company” is not a good answer
  - Depending on size of company, talk to management about engaging comms/legal teams

- Request/Require credit for your work
  - Research is not better when ghostwritten
  - Employees are motivated by recognition; it’s OK to ask for it
  - If you’re told someone else’s name might go on your work because of their “name recognition” — say no

- Call out marketers, but focus on sharing how to do better vs. focusing just on what sucks
Everybody must reduce harm

What do manufacturers do? Try to make stuff that doesn’t harm

What do security vendors do? Sell stuff intended to reduce harm

What do researchers / engineers / practitioners do? Reduce harm

What do marketers often do? Create risk or sensationalize
Everybody must reduce harm

What do manufacturers do? Try to make stuff that doesn’t harm

What do security vendors do? Sell stuff intended to reduce harm

What do researchers / engineers / practitioners do? Reduce harm

What do marketers often do? Reduce harm
What do manufacturers do?
Try to make stuff that doesn’t harm

What do security vendors do?
Sell stuff intended to reduce harm

What do researchers / engineers / practitioners do?
Reduce harm

What do marketers often do?
Reduce harm

Everybody must reduce harm
