increasing No of SW

HITBSecConf

2022 Singapore

------ #HITB2022SIN

BackGround -Current MCU software Test

- Code Walk-through
- Semi-formal verification
- Formal verification
- Interface test
- Unit test
- Fault injection test
- Static code analysis
- Data flow analysis

- statement coverage
- branch coverage
- MC/DC

Coverage-guided fuzzing maybe helpful.

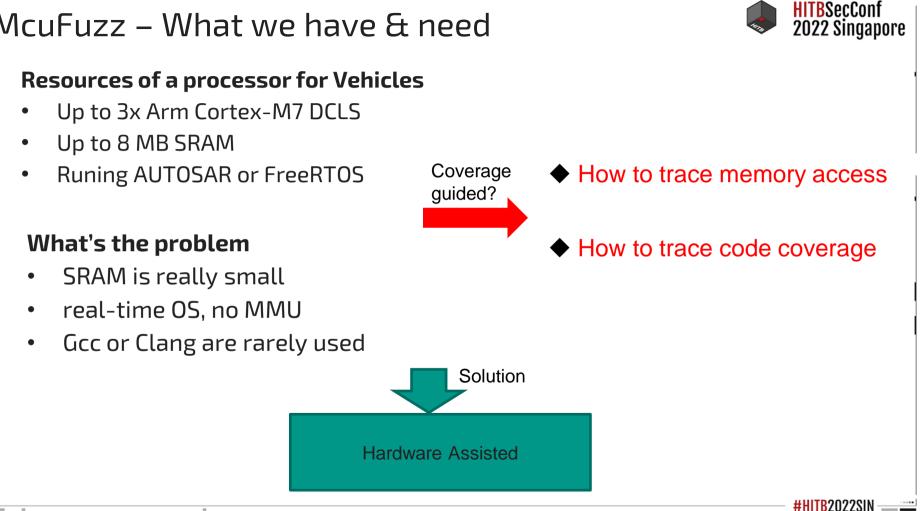

There are never enough ways to test.

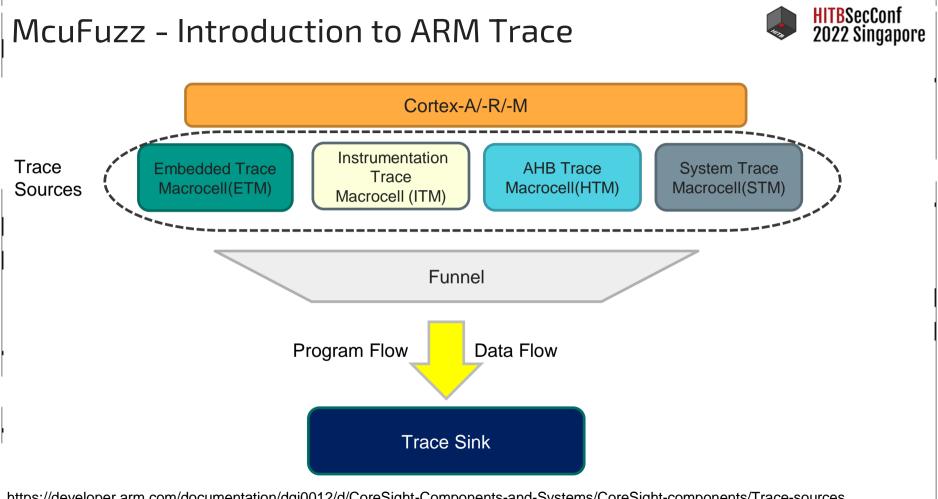

The Mcu Fuzzing

....

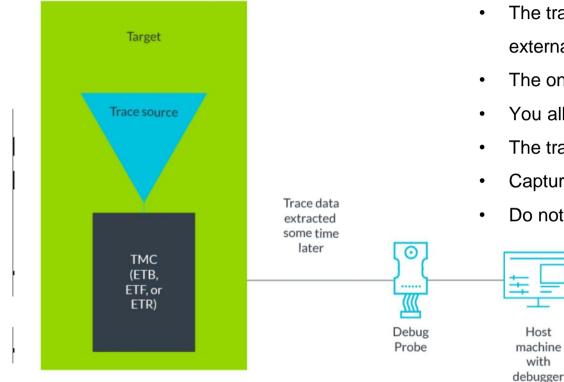

McuFuzz – What we have & need

https://developer.arm.com/documentation/dgi0012/d/CoreSight-Components-and-Systems/CoreSight-components/Trace-sources

McuFuzz – ETM on-chip trace

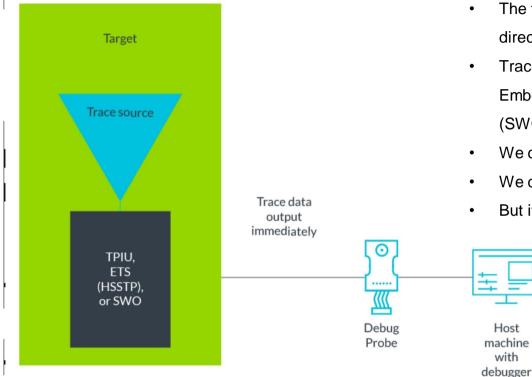

- The trace data is on chip and is exported to the external debugger.
- The on-chip buffer is usually small.
- You allways need filtering.
- The trace data is heavily compressed.
- Capture trace at a much higher speed.
- Do not require any trace pins, JTAG is enough.

https://developer.arm.com/documentation/102119/latest/

HITBSecConf

2022 Singapore

McuFuzz – ETM off-chip trace

• The trace data is output from the target to a debug unit or directly to the external debugger.

HITBSecConf

#HITB2022SIN

2022 Singapore

- Trace data is output by the Trace Port Interface Unit (TPIU), Embedded Trace Streamer (ETS), or Serial Wire Output (SWO) that is on the target to an external debugger.
- We can have more buffer to store trace data.
- We can trace over a long period.
- But it need additional hardware pins.

https://developer.arm.com/documentation/dgi0012/d/Trace-Capture/Designing-your-trace-system/Differences_between-on-chip-and-off-chip-storage

McuFuzz - ETM's features Summary

- A trace source, part of ARM coresight
- Instruction and data trace
- ETM supports trace filtering
- Can generate cycle-accurate trace
- Can insert timestamps into trace data
- Support on-chip and off-chip trace
- Supported in most Arm-based systems

McuFuzz- Use Trace32 to trace

- PowerView, a universal GUI
- PowerDebug tools for debugging
- PowerTrace tools for program/data flow trace
- Support Cortex-A/-R/-M, TriCore, RISC-V, Power Architecture

https://www.lauterbach.com/frames.html?home.html

McuFuzz – Trace32: Enable ETM

	🔑 B::Trace	- • ×			
D	METHOD Onchip O Ar	Probe OLA EDX ONONE

Trace method

Trace sink is on-chip buffer

• On-chip trace buffer

Trace buffer usage status Fifo mode: If the trace is full, new records will overwrite older records.

AutoInit

- Trace memory contents is erased and previous records are no longer visible
- The trigger unit is set to its initial state.

AutoArm

- Recording and if available triggering is prepared whenever the program execution is started.
- Recording and if available triggering is stopped whenever the program execution is stopped.

This will slow down the fuzzing speed.

https://www2.lauterbach.com/pdf/app_code_coverage.pdf

-

McuFuzz – The advantages

- Compiler independent
- No need to recompile code
- No code instrumentation required
- Coverage-guided

-

Demo

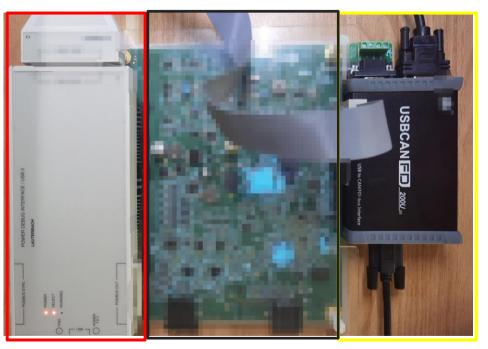

....

Demo – Can service Fuzzing

Trace32 PowerDebug

- Control Target: Run,break,configure ETM
- Get ETM analyzed data
- Monitor crash

Target MCU

USBCAN Device

- Collect init seed corpus
- Send mutated data to target

Demo - Can service Fuzzing

Conclusion

....

Conclusion

- Coverage guided fuzzing on MCU is possible
- ETM and Trace32 is really helpfull
- This prototype is proven effective in our product

Future works:

- Improve fuzzing speed
- More target fuzzing practice
- Off-chip trace is in progress

https://github.com/flankersky/mcufuzz flank3rsky@gmail.com

Thank You!
